

YOUR ROUTER IS ALREADY A SENSOR — WiFi CSI

Presence, breathing, and heart rate through walls. No cameras. \$9 of hardware.

SKILL SHEET · W1D0WM4K3R · B1SCU1TK1D.COM · 2026-10-04

WiFi fills your home with radio waves. Every time someone moves — or breathes — their body disturbs those waves in measurable ways. RuView reads Channel State Information (CSI) from a low-cost ESP32 and turns those disturbances into spatial intelligence.

WHAT IT SENSES

- **Presence & occupancy — through walls, in the dark**
- **Breathing rate & heart rate — contactless, no wearables**
- **Activity & pose — walking / sitting / gestures, 17 body keypoints from CSI**
- **Sleep staging & fall detection — with an apnea-screening angle**
- **Native smart-home: Home Assistant, Apple Home, Google Home, Alexa, Matter**

THE ECOSYSTEM (OPEN SOURCE)

[RuView \(overview\)](#) →

The platform: ESP32 CSI → presence, vitals, pose. Local models, LoRA profiles, RF world model.

[RuView models](#) →

Hugging Face model cards for the sensing heads (presence, activity, vitals).

[esphome-wifi-csi](#) →

ESPHome external component (ESpectre fork). Breathing BPM, 5 GHz, multi-node ML, UDP TX.

[WiSense \(Python\)](#) →

Pure-Python CSI sensing — presence, fall, breathing, occupancy. No cloud, no PyTorch at runtime.

[wifi-ghost](#) →

Through-wall presence + respiration via ESP32-WROOM + a Python aggregator.

HONEST CAVEATS

Accuracy claims are early and partly retracted — the flagship “100% accuracy” figure was withdrawn as single-class. Real-hardware validation is still pending on several projects; much of it is tested on synthetic data. Cheap radios apply automatic gain control (AGC) per packet, which can look like motion to a naive detector. Breathing and heart rate are the least reliable on real hardware.

PRIVACY & DUAL-USE

This is dual-use by design. The legitimate side is strong — elderly fall detection, sleep-apnea screening, occupancy for energy. The other side is surveillance: detecting occupants and vitals through walls without consent. Deploy only in spaces you own or are authorized to monitor. Know what your own router is already capable of.

THE RULE

Publish the method. Protect the private context. This sheet covers public, open capability only.
